

Crypto Certificate Guide

The Bitcoin Suisse Crypto Certificates are easily transferable, high quality paper wallets which hold a private key that is concealed by multiple state of the art security features.

Verify Authenticity & Integrity

Hologram (Nanocrypt™)

Verify that the hologram elements on the front and back side of the certificate are genuine. They should include our company name and logo amongst various other visual effects such as security guilloches and spectral line patterns. In case of doubt the hologram also includes forensic traces that can only be verified by authorized laboratories.

Optically Variable Ink (OptiSafe®)

Verify that the respective currency symbol is featured in an optically variable ink (only visible from some angles) over top of the scratch off lacquer on the private key field. A repeating Bitcoin Suisse logo printed with the same ink should also be present alongside the hologram ribbon on the back side.

Reflective Lettering

Verify that the “Bitcoin Suisse AG” lettering at the top center on the front and back side and the signatures/names on the front side are reflective.

UV Ink

Verify that the front side, including the private key field, is covered by a pattern that includes our company logo which is only visible under UV light. Most importantly, the lines on the private key field should match up perfectly with the surrounding ones.

Check Balance

1. Scan the QR code in the public address field
2. Copy the public address and look it up using one of the following blockchain explorers:

- BTC: blockchain.com/explorer
- ETH, XCHF, DAI: etherscan.io
- BCH: explorer.bitcoin.com/bch
- BSV: blockchair.com/bitcoin-sv
- XTZ: tzscan.io

Redeem

1. Make sure you are in a trusted environment (no strangers or cameras present)
2. Carefully scratch off the lacquer covering the private key field with a coin using not too much force
3. Scan the uncovered private key QR code to sweep the certificate using the wallet software of your choice
